

MICHAEL WANG

(612) 391-3518 — michaelwang@college.harvard.edu — LinkedIn

EDUCATION

Harvard University

Cambridge, MA

A.B. Candidate in Mathematics & Economics; Concurrent M.A. Candidate in Statistics

Aug 2024 – Expected May 2028

- **GPA:** 3.8/4.0. **Coursework:** MATH 55 (Abstract Algebra, Analysis, Topology), Measure Theory, Graduate Probability, Stochastic Processes, Econometrics, Statistical Inference, Algebraic Geometry, and Linear/Generalized Linear Models.

EXPERIENCE

Opportunity Insights

Cambridge, MA

Research Assistant to Raj Chetty and Yechan Park

May 2026 – Present

- **Spatial spillovers:** Derived and implemented design-based GMM estimators, specification tests, and regularized exposure-map selection; built Python/SLURM Monte Carlo pipelines for anti-poverty experiments in India and Kenya. The resulting analysis rejected the original 2 km Kenya support, selected 4–6 km supports, and revised the implied local transfer multiplier from 2.5 to 1.43.
- **OpenAI Exchange – AI productivity gains:** Developing an empirical-Bayes data-fusion framework that calibrates platform-scale model scores using a randomized validation sample to map gains across $\sim 1,000$ occupation-task cells; derived identification and near-oracle risk guarantees and designed simulations to size the validation experiment.
- **Leave-one-out estimation:** Developing and implementing a general leave-one-out regression framework in Python and R for settings in which observed regressors and heterogeneous parameters are indexed at different levels; designed and ran simulation studies to evaluate the estimator's finite-sample behavior.

Harvard Business School

Boston, MA

Research Assistant to Jeremy Stein and Laura Nicolae

May 2025 – Nov 2025

- Constructed a panel of 10-K filings, earnings-call transcripts, and financial statements for 17 large bank holding companies to identify whether the supplementary leverage ratio or risk-based capital requirements were binding.
- Built a Python NLP pipeline combining sentiment analysis and capital-constraint text classification to quantify managerial outlook and link textual signals to subsequent changes in business-line asset allocation.
- Estimated difference-in-differences and portfolio-share models linking regulatory constraints and textual signals to balance-sheet behavior, finding a preliminary 20–30 bp aggregate ROA cost associated with simultaneous leverage and risk-based capital constraints.

Charles River Economics Lab

Cambridge, MA

Co-Director of Research

Jan 2025 – Present

- Led development of an end-to-end labor-market analytics pipeline linking CPS, ACS, JOLTS, SEC filings, earnings calls, and patent data across 300+ industries and 48 states.
- Constructed six measures of generative-AI exposure and estimated fixed-effects, difference-in-differences, and instrumental-variables models, producing a monthly state-industry tracker of employment, wage, and vacancy outcomes.
- Led a separate county-level analysis of ACA premium increases for The Century Foundation, producing published results used to support congressional testimony.

LEADERSHIP & ACTIVITIES

Harvard Undergraduate Science Olympiad

Cambridge, MA

Director of Finance

Sep 2024 – Present

- Managed budgeting and logistics for an intercollegiate competition with 700+ participants and secured corporate sponsorships, including Jane Street.

TECHNICAL SKILLS

Programming: Python, R, SQL, Java

Research Computing: Linux, Bash, SLURM, Git, GCP, L^AT_EX

Languages: English (Native), Mandarin (Professional Working Proficiency)

ADDITIONAL

Honors: AIME Score: 10/15; USNCO National Top 150

Activities: Harvard Undergraduate Quant Traders; Harvard–Yale Trading Competition

Interests: Poker, Basketball, Tennis, Film, Dance
